Simplify Technology ∎ Simplify Experience®

Bypass Legacy BSS to Break Free for Business Agility.

With the advancement of the public cloud and cloud-native technologies, CSPs now have at their disposal realistic and accessible options to bypass the complexities of legacy BSS monoliths and replatform by moving to less costly and simplified cloud-native BSS platforms.

LotusFlare helped GOMO to replatform by deploying, configure and integrating

LotusFlare DNO™ Cloud

to power the newly-defined customer experience for 3 million GOMO customers.

Area/Capability	DNO™ Cloud	Previous BSS
Time to Launch New Offers	1 day	6 weeks
Number of Vendors Needed	1	3
GOMO App UI Response Time	100 milliseconds	1 second
New Feature Release Cycle	1 month	6 months
Vendor-Related Operational Costs	Reduced by 40%	—

Key To Replatforming: Planning for Flawless Migration.

What helped to make GOMO replatforming successful was the flawless way in which 3 million GOMO customers were migrated to LotusFlare DNO Cloud within a 4.5 hour window. Globe Telecom and LotusFlare used the following as guidelines for the planning and execution of data migration from the legacy BSS to LotusFlare DNO Cloud:

- Deeply understand source and target data.
- Map legacy and cloud-native BSS fields and define database ingestion criteria.
- Prepare scripts based on data mapping and conduct dry runs for accurate field ingestion.
- After ingestion, emit events for migration statistics and share results with the CSP.
- Test user journeys to ensure correct data modification, update and appending.
